

**Pmg – 1:** Photomicrograph showing subrounded dahllite patch within quartz wacke as seen under crossed nicols.

**Specimen No. :MNP01/ P-01**

**Magnification : 100X**

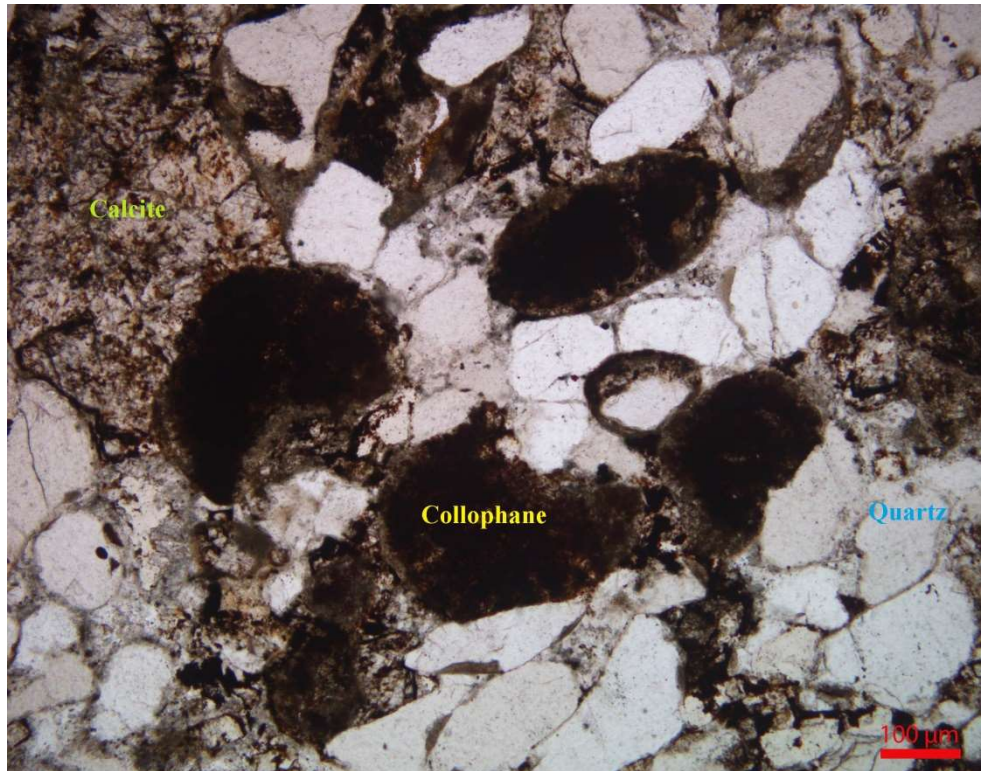

**Pmg – 2:** Photomicrograph showing fine subrounded to subangular quartz grains floating over micritic matrix in quartz wacke as seen under crossed nicols.

**Specimen No. :MNP12/ P-02**

**Magnification : 100**

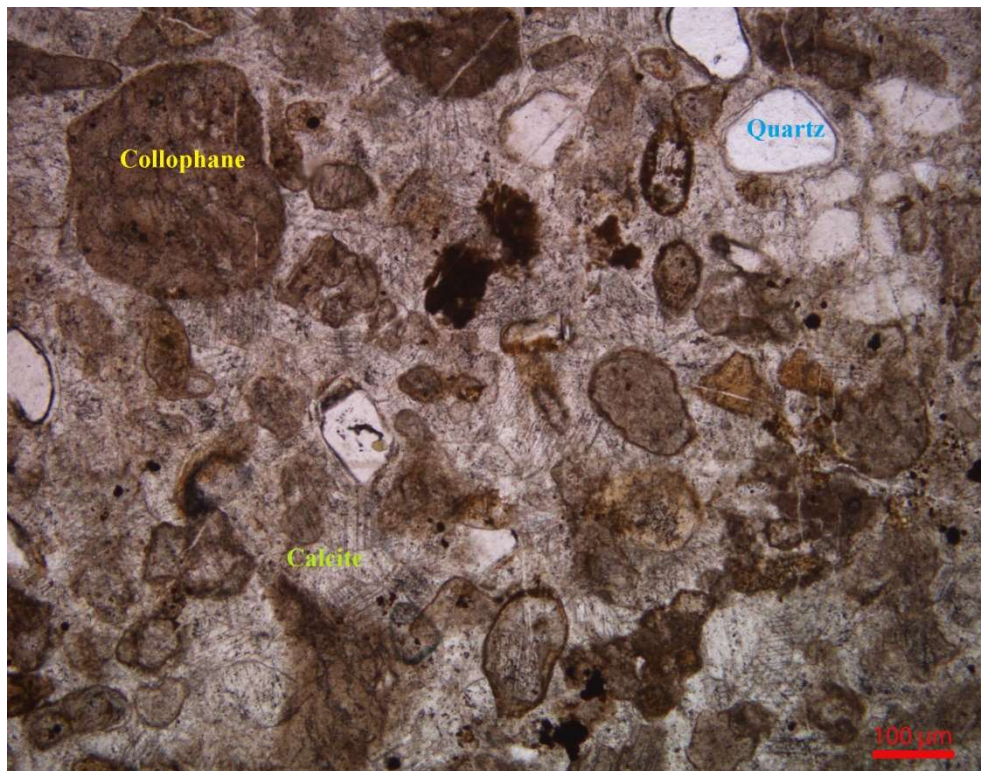

**Pmg – 3:** Photomicrograph showing fine collophane pisolites within quartz wacke as seen under plane polarized light.

**Specimen No. :MNP15/ P-08**

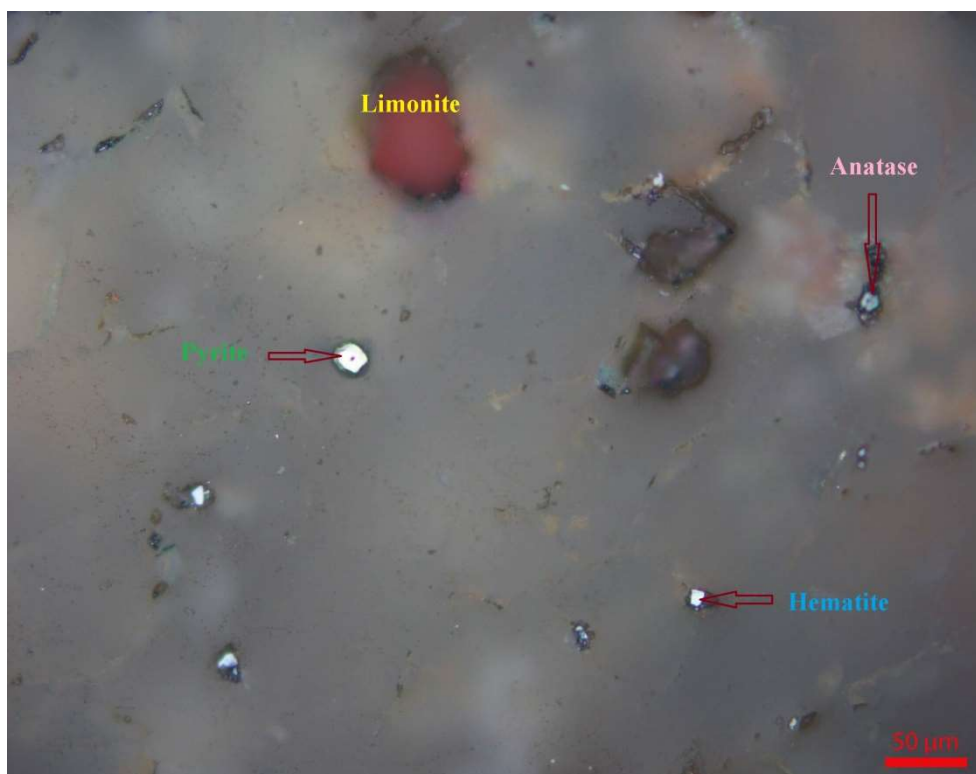

**Magnification : 100X**

**Pmg – 4:** Photomicrograph showing fine anhedral patches and pisolites of collophane within impure micritic limestone as seen under plane polarized light.

**Specimen No. :MNP24/ P-11**

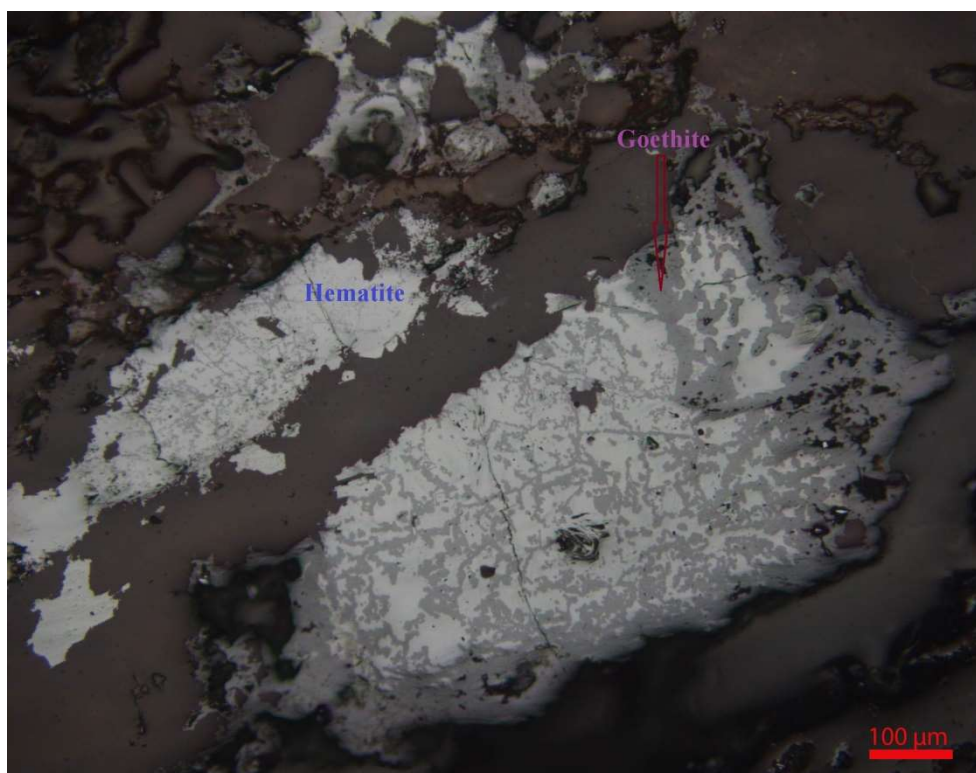

**Magnification : 100X**

**Pmg – 5:** Photomicrograph showing very fine specks of pyrite, hematite and anatase and very fine amorphous aggregates of limonite along pores as seen under reflected light.

**Specimen No. :MNP21/M-01**

**Magnification : 200X**

**Pmg – 6:** Photomicrograph showing hematite patches being replaced by goethite fillings as seen under reflected light.

**Specimen No. :MNP32/M-05**

**Magnification : 100X**
